Zwe Htet Paing

AI / ML Engineer | Data Scientist

Bangkok, Thailand | (+66) 65-647-9406 | zwehtetpaing.works@gmail.com | LinkedIn | GitHub

SUMMARY

AI/ML engineer with 5+ years building AI systems — from early NLP and speech work on low-resource languages to today's focus on LLM orchestration, RAG pipelines, and agentic coding. Ships full-stack applications and automation pipelines, including replacing a manual reporting workflow with an end-to-end LLM pipeline and building a full-stack algorithmic trading platform.

SKILLS

Generative AI: LLMs, RAG, Prompt Engineering, Vector Stores, Claude, OpenAI, Gemini

ML & AI Frameworks: PyTorch, TensorFlow, Scikit-learn, Hugging Face Transformers, LangChain, LangGraph, MLflow

Languages & Databases: Python, JavaScript (React), SQL, PostgreSQL, MySQL, Supabase

Data & Automation: Pandas, Airflow, Prefect, n8n, FastAPI, Flask, Django, Web Scraping, Pipeline Automation

Cloud & DevOps: AWS, GCP, DigitalOcean, Docker, Terraform, CI/CD

NLP & CV: NER, Sentiment Analysis, Speech Recognition, Human Activity Recognition, YOLO

EXPERIENCE

AI Software Developer · B4Purpose · France (Remote) · Contract *Jul 2024 – Sep 2024*

- Automated ESG report generation by integrating existing per-section scripts into a single end-to-end LLM pipeline, replacing manual assembly.
- Scaled the pipeline to handle multiple concurrent reports by refactoring the architecture and integrating a relational database.

AI/ML Engineer · PROMES Myanmar · Yangon, Myanmar *Dec 2022 – Apr 2024*

- Automated data ingestion across 3 sources (community, social media, lottery), eliminating manual collection entirely.
- Cut manual reporting effort by 50% by automating Excel workflows with Python (openpyxl).
- Designed and deployed backend APIs that scaled cleanly as data volume and operations grew.
- Pioneered an end-to-end NLP pipeline for Burmese (ASR, NER, sentiment analysis) — the team's first solution for a low-resource language.

Data Scientist · Bagan Innovation Technology (BIT) · Yangon, Myanmar *Dec 2021 – Nov 2022*

- Built NLP models (sentiment analysis, topic modeling, NER) on social media and e-commerce data to inform product decisions.
- Drove a sustained 10% month-over-month lift in user engagement through recurring insight reporting.
- Improved Burmese ASR accuracy on Bagan Keyboard by adapting Kaldi language models and training a new ESPnet ASR model.

AI/ML Engineer (Junior) · METRO Computer Myanmar · Yangon, Myanmar *Nov 2020 – Jun 2021*

- Co-built deep learning models for human activity recognition, from research through deployment.
- Owned large-scale data pipelines end-to-end: collection, preprocessing, and annotation.
- Fine-tuned classifiers to improve benchmark accuracy.

FREELANCE

AI Software Engineer · iSocialize · Japan (Remote) *Dec 2025 – Present*

- Built multiple n8n workflows automating AI content operations end-to-end, eliminating manual overhead at scale.
- Shipped an MCP server connecting the social marketplace to ChatGPT, opening the platform to third-party AI integrations.
- Packaged backend APIs as custom n8n nodes, enabling fully automated content posting with no manual steps.
- Used agentic coding to refactor existing code to production quality, resolving structural issues and achieving consistent cross-device rendering.

Python Developer · Arculem LLC · US (Upwork) *Oct 2025 – Jan 2026*

- Contributed to a full-stack algorithmic trading platform (React/TypeScript, FastAPI, PostgreSQL) covering strategy development, bot execution, and portfolio monitoring, with each live trading bot isolated in its own Docker container.
- Built market-data, a Dockerized pipeline (Redis Streams, REST API) ingesting live trades, order books, and open interest from 8+ exchanges (Binance, Bybit, OKX, Coinbase, Hyperliquid, and more), serving derived candles, CVD, and order-book state to downstream strategies.
- Built context-service, aggregating on-chain, macro, and TradFi data from 11 providers (CryptoQuant, Alpha Vantage, CoinGecko, DeFiLlama, and more) behind a single API, decoupling trading and research systems from individual provider integrations.
- Designed research-lab, a labeling and adjudication workbench turning detected trading signals into an audited training dataset through a sync → label → review → adjudicate pipeline.

Python Developer · QP Signal · Bangkok, Thailand *Dec 2024 – Jun 2025*

- Built a Django + Plotly dashboard for signal performance analysis.
- Expanded the signal data pool by shipping a Telegram listener that accepted user-submitted channels.
- Enriched Solana token intelligence by fusing on-chain data from PumpFun, DexScreener, and BirdEye with third-party APIs into a single pipeline.

PERSONAL PROJECTS

- Cook Assistant (RAG) — Personalized recipe recommendation engine using vector search and LLMs over a recipe corpus.
- Airbnb Price Prediction (MLOps) — End-to-end MLOps pipeline for NYC listings: data versioning, experiment tracking, and automated deployment.
- House Price Prediction — Regression model with engineered features for real-time property price estimation.

EDUCATION

BSc Information Science and Technology · University of Technology (Yatanarpon Cyber City), Myanmar *2013 – 2019*
