SUMMARY

AI/ML Engineer with 5 years of hands-on experience building and experimenting with machine learning, NLP, and generative AI systems across social media, e-commerce, and crypto-fintech domains. Developed end-to-end pipelines for RAG and automated trading, reduced manual reporting effort by 50% through Python automation, and audited AI-generated (vibe-coded) frontend code to bring it to production quality. Proficient across the full stack — Python backends, React frontends, cloud infrastructure, and end-to-end ML deployment.

SKILLS

Languages & Databases: Python, JavaScript (React), Rust, SQL, PostgreSQL, MySQL, Supabase

ML & AI Frameworks: PyTorch, TensorFlow, Scikit-learn, Hugging Face Transformers, LangChain, LangGraph, MLflow

Generative AI: LLMs, Retrieval-Augmented Generation (RAG), Prompt Engineering, Vector Stores, Claude, OpenAI, Gemini

Data & Automation: Pandas, Apache Airflow, Prefect, n8n, FastAPI, Flask, Django, Web Scraping, Pipeline Automation

Cloud & DevOps: AWS, GCP, DigitalOcean, Docker, Terraform, CI/CD

NLP & Computer Vision: Named Entity Recognition, Sentiment Analysis, Speech Recognition, Human Activity Recognition

EXPERIENCE

Software Engineer | **iSocialize** | Japan (Remote)

Dec 2025 – Present · Part-time

- Engineered n8n automation workflows for AI-powered content generation, reducing manual content ops overhead.
- Implemented an MCP server enabling seamless integration between a social marketplace and ChatGPT, extending platform functionality to third-party AI tools.
- Built RESTful backend APIs as custom n8n nodes, integrating automated content posting directly into the team's workflow automation pipelines.
- Audited and refactored AI-generated (vibe-coded) frontend code, resolving structural issues and improving code quality, maintainability, and cross-device rendering.

AI Software Developer | **B4Purpose** | France (Remote)

Jul 2024 – Sep 2024 · Contract

- Built an ESG report generation pipeline using prompt engineering and LLMs, automating a previously manual reporting process.
- Refactored pipeline architecture and integrated a relational database, improving system throughput and scalability.

AI/ML Engineer | **PROMES Myanmar** | Yangon, Myanmar

Dec 2022 – Apr 2024

- Automated collection and processing of community, social media, and lottery data to feed analytical pipelines.
- Automated Excel reporting and data processing using Python (openpyxl), cutting manual reporting effort by 50%.
- Deployed scalable backend APIs to handle growing server-side data operations.
- Researched and prototyped a Burmese NLP pipeline covering NER, sentiment analysis, and speech recognition — demonstrated end-to-end feasibility for a low-resource language.

Data Scientist | **Bagan Innovation Technology (BIT)** | Yangon, Myanmar *Dec 2021 – Nov 2022*

- Developed NLP models for sentiment analysis, topic modeling, and named entity recognition on unstructured social media and e-commerce data.
- Delivered monthly actionable insights that contributed to a sustained 10% month-over-month increase in user engagement.
- Improved Burmese speech-to-text accuracy for the Bagan Keyboard app via language model adaptation in Kaldi; researched and trained a new end-to-end ASR model using ESPnet.

AI/ML Engineer (Junior) | **METRO Computer Myanmar** | Yangon, Myanmar *Nov 2020 – Jun 2021*

- Co-developed computer vision models for human activity recognition using deep learning.
- Managed large-scale data collection, preprocessing, and annotation pipelines.
- Fine-tuned classification models, achieving measurable improvements in accuracy benchmarks.

FREELANCE

Python Developer | **Arculem LLC** | US (Upwork) *Oct 2025 – Jan 2026*

- Built a full-stack algorithmic trading platform using React/TypeScript, FastAPI, and PostgreSQL, covering strategy development, live execution, and portfolio monitoring.
- Engineered dynamic Docker container orchestration to provision isolated environments per live trading bot, ensuring independent and secure strategy execution.
- Integrated Freqtrade and CCXT for multi-exchange backtesting and live trade execution, with performance analytics covering PnL, drawdown, and win rates.
- Built a real-time monitoring dashboard with WebSocket live feeds and Discord webhook integration for trade alerts and reaction-based data labeling.

Python Developer | **QP Signal** | Bangkok, Thailand *Dec 2024 – Jun 2025*

- Contributed to a Telegram bot that delivered real-time cryptocurrency alerts with automated signal tracking, reducing trader response time to market events.
- Developed a Django Admin dashboard with interactive Plotly charts for signal performance analysis, enabling data-driven strategy evaluation.
- Evaluated signal win-rates and optimized strategy parameters, directly improving signal accuracy.
- Built a Telegram listener bot allowing users to submit their own channels, expanding the signal data pool and contributing to ongoing signal quality improvement.
- Developed data pipeline to extract and enrich Solana token metadata by integrating on-chain data with third-party APIs, supporting deeper signal analysis and token intelligence.

NOTABLE PROJECTS

- [Cook Assistant with RAG](#) — End-to-end RAG pipeline for personalized recipe recommendation using vector search and LLMs.
- [Airbnb Price Prediction \(MLOps\)](#) — Full MLOps pipeline for NYC Airbnb price prediction including data versioning, model tracking, and deployment.
- [House Price Prediction](#) — Regression model with feature engineering delivering real-time property price estimates.

EDUCATION

Bachelor of Science – Information Science and Technology

University of Technology (Yatanarpon Cyber City), Myanmar · 2013 – 2019

LANGUAGES

- English — Professional working proficiency
- Burmese — Native
